

## 2020 ECEMS protocol changes

- Additions:
  - Adrenal insufficiency crisis with training link
  - Traumatic Brain Injury
  - Orogastric tube placement and maintenance
  - \*\*Syncope (Bend Fire to forward)
  - Patellar Dislocation Reduction
  - Droperidol (Inapsine)
- Deletions:
  - IN use for Morphine based on lack of bioavailability of the drug via this route
- POLST registry number updated in death in the field protocol
- Transport verbiage added for diversion to closest facility during trauma arrest in trauma system protocol
- Picture for Tension Pneumo procedure updated
- Updates to Diltiazem, Calcium Chloride and Calcium Gluconate med sheets
- Emphasis/verbiage added to RSI protocol to ensure pt is “physiologically optimized” prior to RSI procedure based on presenting condition
- All BP cutoffs for adult hypotension listed as 100 mmHg systolic or MAP of 70mmHg except for trauma system entry criteria.
- IO added to any IV medication administration except for Adenosine admin and chemical restraint use of medications
- Distal Femur added as optional site for pediatric pts with training link
